Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1-26. (Canceled)

- 27. (Currently Amended) A method of producing a protein <u>insulin</u> in a subject in vivo, the method comprising introducing into the subject an intermediate lobe pituitary cell that has been genetically engineered to express <u>insulin</u> the protein.
- 28. (Currently Amended) The method of claim 27, wherein said intermediate lobe pituitary cell comprises a nucleic acid sequence which encodes <u>insulin</u> the protein, the nucleic acid sequence being operatively linked to a heterologous control region.
 - 29. (Canceled)
- 30. (Previously Presented) The method of claim 27, wherein said intermediate lobe pituitary cell is an autologous cell.
- 31. (Currently Amended) The method of claim 28, wherein said subject is a human and the intermediate lobe pituitary cell is an autologous cell.

Claims 32-59 (Canceled)

- 60. (Previously Presented) The method of claim 27, wherein said intermediate lobe pituitary cell is an allogenic cell.
- 61. (Previously Presented) The method of claim 27, wherein said intermediate lobe pituitary cell is a xenogenic cell.

62-63. (Canceled)

64. (Currently Amended) The method of claim 29 28, wherein said cell further comprises one or more nucleotide sequence encoding a protein that controls expression of insulin in a glucose stimulated manner.

- 65. (Previously Presented) The method of claim 64, wherein said protein that controls expression of insulin in a glucose stimulated manner is a glucokinase.
- 66. (Previously Presented) The method of claim 65, wherein said glucokinase is the β -cell isoform of glucokinase.
- 66. (Previously Presented) The method of claim 64, wherein said protein that controls expression of insulin in a glucose stimulated manner is a glucose transporter.
- 67. (Previously Presented) The method of claim 66, wherein said glucose transporter is GLUT-2.
- 68. (Previously Presented) The method of claim 64, wherein said protein that controls expression of insulin in a glucose stimulated manner is an ion channel that mediates glucose-stimulated insulin release.
- 69. (Previously Presented) The method of claim 68, wherein said ion channel that mediates glucose-stimulated insulin release is a K+/ATP ion channel.
- 70. (Previously Presented) The method of claim 64, wherein said protein that controls expression of insulin in a glucose stimulated manner is glucagon-like peptide-1 (GLP-1).

71. (Previously Presented) The method of claim 64, further comprising evaluating the subject for a parameter relating to glucose metabolism or insulin secretion.

72. (Previously Presented) The method of claim 71, wherein said parameter is selected from the group consisting of: the amount, distribution or structure of intracellular or extracellular insulin; glucose phosphorylating activity; glucose utilization; glucose uptake; and insulin secretion.

73. (Previously Presented) The method of claim 28, wherein said control region is a pro-opiomelanocortin (POMC) promoter.

74-77. (Canceled)

- 78. (Previously Presented) The method of claim 27, wherein said intermediate lobe pituitary cell is a fetal or post natal cell.
 - 79. (Previously Presented) The method of claim 27, wherein said subject is a human.
- 80. (Currently Amended) The method of claim 27, wherein said <u>intermediate lobe</u> <u>pituitary</u> cell is a cultured cell.
- 81. (Previously Presented) The method of claim 80, wherein said cultured cell is a cultured human cell.
- 82. (Previously Presented) The method of claim 27, wherein said cell is from a non-human transgenic animal.

83-84. (Canceled)

85. (Previously Presented) The method of claim 27, further comprising the step of administering an immunosuppressant to the subject.
